

## CLAIMS

What is claimed is:

**[c01]** A method, comprising the steps of:

receiving a request for a Uniform Resource Locator, the request originating from a referring Uniform Resource Locator;  
communicating a response to the request; and  
storing in a database the requested Uniform Resource Locator and the referring Uniform Resource Locator to determine if an error exists in the response.

**[c02]** A method according to claim 1, further comprising the step of storing a status code associated with the response.

**[c03]** A method according to claim 1, further comprising the step of storing a file size associated with the response.

**[c04]** A method according to claim 1, further comprising the step of storing in the database a status code associated with the response and a file size associated with the response.

**[c05]** A method according to claim 1, wherein if the response contains no data, then storing in the database the referring Uniform Resource Locator.

**[c06]** A method according to claim 1, further comprising the step of presenting to a user at least two of 1) the requested Uniform Resource Locator, 2) the referring Uniform Resource Locator, 3) a status code associated with the response, and 4) a file size associated with the response.

**[c07]** A method for verifying the integrity of web server content, the method comprising the steps of:

receiving a request at a web server, the request originating from a referring Uniform Resource Locator and requesting a resource associated with a requested Uniform Resource Locator;

communicating a response to the request;

storing in a database the requested Uniform Resource Locator, the referring Uniform Resource Locator, a status code associated with the response, and a file size associated with the resource.

**[c08]** A method according to claim 7, wherein if the status code is erroneous, then presenting the requested Uniform Resource Locator with the referring Uniform Resource Locator.

**[c09]** A method according to claim 7, wherein if the file size is incorrect, then presenting the requested Uniform Resource Locator with the referring Uniform Resource Locator.

**[c10]** A method according to claim 7, further comprising the step of presenting to a user at least two of 1) the requested Uniform Resource Locator, 2) the referring Uniform Resource Locator, 3) a status code associated with the response, and 4) a file size associated with the response.

**[c11]** A system, comprising:

an Integrity Module stored in a memory device, and a processor communicating with the memory device;

the Integrity Module receiving a request for a Uniform Resource Locator, the request originating from a referring Uniform Resource Locator, and when a response to the request is communicated, the Integrity Module stores in a database the requested

Uniform Resource Locator, the referring Uniform Resource Locator, a status code associated with the response, and a file size associated with the response.

**[c12]** A computer program product, comprising:

a computer-readable medium; and

an Integrity Module stored on the computer-readable medium, the Integrity Module receiving a request for a Uniform Resource Locator, the request originating from a referring Uniform Resource Locator, and when a response to the request is communicated, the Integrity Module stores in a database the requested Uniform Resource Locator, the referring Uniform Resource Locator, a status code associated with the response, and a file size associated with the response.
